**Hampton Township School District**

**For Board Information**

**Executive Summary**

Topic: High School Student Handbook

Purpose of the Summary

- ☒ New Information  
☐ Consideration for Action Item  
☐ Board Request

**General Overview**

The high school is requesting the school board approve the addition of a course titled CORE to the engineering department course offerings in the 2022-2023 Program of Studies.

**Summary of Program**

CORE is based on curriculum from the National Center for Construction Education and Research. The course is a competency-based program that is industry-recognized as a prerequisite for the educational component of apprenticeships in construction trades that are completed with private companies (ie. electrical, HVAC, sprinkler fitters, laborer, roofing). Individuals interested in attending a technical school, entering the work force as a skilled worker, or attending college for a degree in construction, architecture, or engineering would benefit from this course as a basic introduction to construction: safety, construction math, hand tools, power tools, construction drawings, rigging, communication, and basic employability skills.
